

The full story in four screens

A plain-language guide to what the reviewer should see during the demo.

THE SCENARIO

A dispatcher sends work to a live pool. The first available officer claims it, responds, reports, and closes the loop.

DEMO SEQUENCE

1

Sign in

Seeded credentials open the correct role only.

2

Go available

The officer explicitly joins the eligible pool.

3

Receive and claim

Push plus Realtime delivers the incident; first tap wins.

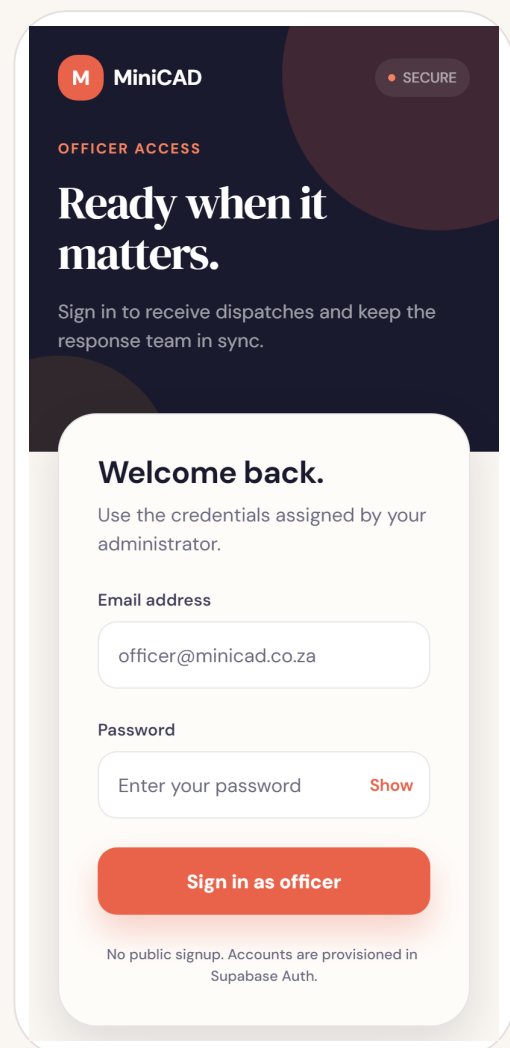

4

Update and report

Status moves forward, then the report resolves the incident.

WHAT STAYS IN SYNC

Officer duty, incident ownership, status and reports all live in one Supabase project. The web and mobile apps never keep separate operational truth.

Web

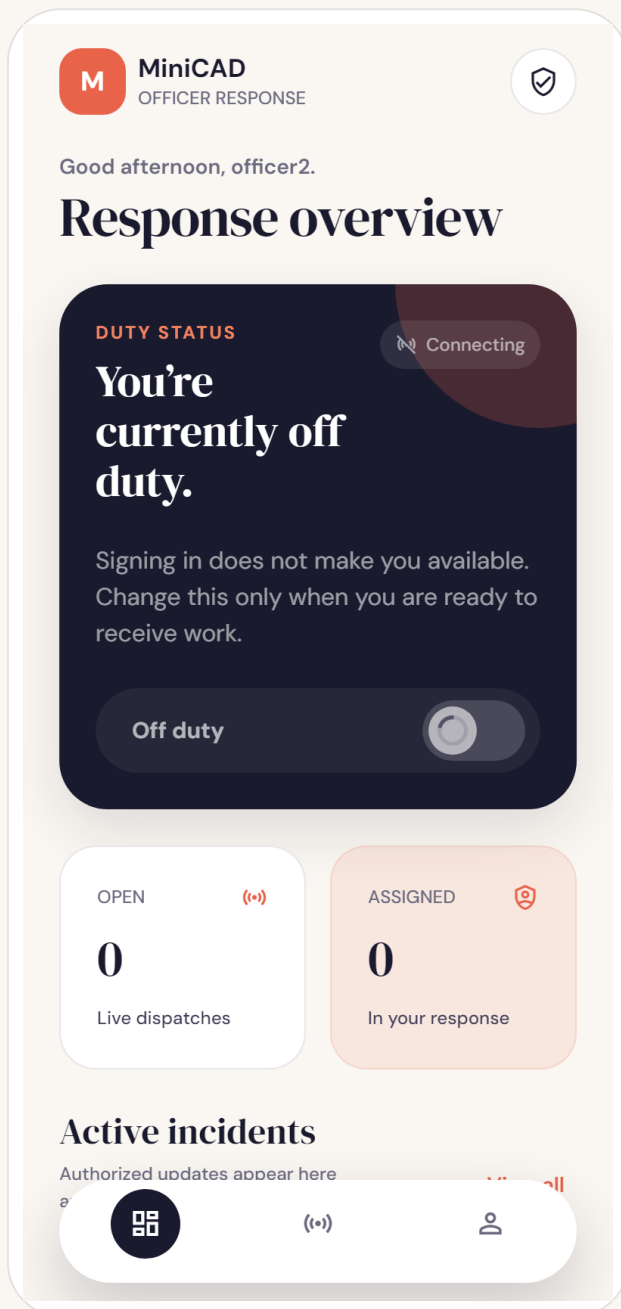

Supabase

Mobile

Officer readiness

Being signed in is not the same as being available for dispatch.

WHAT TO POINT OUT

1 Explicit control

The officer decides when to go Available or Off duty.

2 Live state

Duty changes are stored in Supabase and reflected on the dispatcher roster without refresh.

3 Responding lock

Once assigned, availability cannot be switched off until the final report is accepted.

4 Clear context

Open and assigned counts give the officer a fast operational summary.

ELIGIBILITY RULE

Only logged-in, on-duty and unassigned officers are eligible for a new dispatch.

Shown: actual Expo UI rendered at a 390 x 844 phone viewport.

Dispatch and first-wins claim

The same incident appears to eligible officers and changes everywhere when claimed.

BEHIND THE SCREEN

1

Dispatcher broadcasts

A New incident becomes Dispatched only when an eligible officer exists.

2

Device alert arrives

The Edge Function selects on-duty token owners and sends Expo push with sound and vibration.

3

Officer reviews

Priority color, incident details and location support a quick choice.

4

Database chooses

The claim RPC performs one conditional update. Two simultaneous taps still produce one owner.

5

Everyone reconciles

Private Realtime invalidation makes other officer lists and the dispatcher view refresh their authorized snapshot.

IMPORTANT

Off-duty officers may inspect the queue, but the Claim action remains locked until they go Available.

RESPONSE QUEUE

 Live

Active incidents

Dispatched calls arrive here automatically and are ordered newest first.

You can inspect dispatched calls while off duty. Go Available on Overview to claim one.

MC-000042

Burglary in progress

High

Caller reports movement inside the property. Respond with caution.

24 Main Street, Riverton

04 Sep, 14:27

Dispatched

Go available to claim

Respond, report and close

The assigned officer owns the response until the report resolves it.

RESPONSE PIPELINE

Update status

🛡️ Claimed

🚒 En route

📍 On scene
Current status

📄 Resolved · report filed

FINAL REPORT

Close the incident

Record what you did and the final outcome. Submission resolves the incident and unlocks availability.

Response details

0/2000

Describe arrival, assessment, actions taken, and any relevant handover...

Outcome

0/1000

Summarise the outcome and how the incident was concluded...

STATUS PIPELINE

FINAL REPORT

COMPLETION BEHAVIOR

1. Only the assigned officer can advance Claimed → En route → On scene.
2. Actions and outcome are validated, stored once, and stamped with server resolution time.
3. The incident becomes Resolved; the dispatcher receives a toast and the report appears in the archive.
4. The officer returns to Overview and can become available for the next call.

Queue, response and report screens use temporary intercepted test data for documentation capture; no Supabase records were changed.
